

Post-Simulation Questions

Speaker A: So, in your experience, so what kind of like social or like work environments would you actually reach for this type of robot? And you know, like, would you bother using this type of robot or like assistance with your like, let's say, office lingo?

Speaker B: Yes, I think it should. I feel like I didn't know what questions to ask it because it all went so fast. So I feel like it needs to be listening to the conversation, if that makes sense.

Speaker A: Okay.

Speaker B: Because I didn't know what I didn't know. Does that make sense? So I didn't know what to ask the robot after the fact.

Speaker A: I was going to say, what?

Speaker B: Yeah. Okay.

Speaker A: So you want the robot add some context prior to you asking?

Speaker B: Yeah, right. Or like giving it as I go.

Speaker A: Okay.

Speaker B: Everything happened so fast.

Speaker A: Um, did you feel like there's a moment where you felt left behind? Uh, like, let's assume like your coworkers knew what to do but you didn't, and you had to rely on a robot or someone else to, to understand what the message was. Would you felt more left behind with the robot, without about the robot?

Speaker B: It's nice to have.

Speaker A: Okay.

Speaker B: Um, it's like a good comfort that I have something. Um, and I guess it's less scary than asking coworkers.

Speaker A: Yeah.

Speaker B: Um, but I think my first reaction was to actually ask you guys what it was.

Speaker A: Yeah.

Speaker B: Um, rather than the robot. But that tied into my first response of like, I didn't know what to ask.

Speaker A: Okay.

Speaker B: Whereas you guys knew what they were talking about. Yeah, because you have context. Um, but yeah, it's nice to have.

Speaker A: So you're more comfortable asking coworkers as a first— in your first instinct?

Speaker B: Yes, but that's just me, and I think it depends on that. Okay. Um, I think if, if we— if I was— if I had a meeting and then it sort of just ended, and then the people who were in the meeting with me I couldn't reach out to, okay, then I would use it because it's like with me.

Speaker A: Okay. For like the robot's way of displaying help, would you feel like— like you already saw, like it's showing text, but would you rather publicly listening to like some sort of like response or have it in private like with the text thingy?

Speaker B: I didn't see— like in that situation, I think I would have just like gone on my computer and asked it like—

Speaker A: Like privately?

Speaker B: Yes.

Speaker A: Okay.

Speaker B: Because there wasn't any benefit. Being here because even though it was like there, it wasn't listening, so it wasn't in the space so that like there was no point. I still had to like interface with it afterwards like I would a computer.

Speaker A: Okay.

Speaker B: Um, so I think I would have just privately looked it up.

Speaker A: Okay.

Speaker B: Um, yeah.

Speaker A: So even— so basically you would rather privately solve the issues yourself? Yes.

Speaker B: Yeah, because it saves the embarrassment.

Speaker A: Yeah, yeah, yeah. Uh, final question: if the robot wasn't there, how would this exact briefing look like to you?

Speaker B: Probably, probably similar to how it went, except I would just use my computer to look it up.

Speaker A: Okay.

Speaker B: Um, and I wouldn't be— even with looking it up, I wouldn't be sure that that's what they meant in the context. So yeah, I think I just would have gone like Google or ChatGPT and asked it.

Speaker A: So it would be so difficult you'd need like ChatGPT's help to do it for you?

Speaker B: Yeah, similar to what the robot did.

Speaker A: Yeah.

Speaker B: I feel like he was like an after— the meeting was happening so fast. But I couldn't actually ask him while it was happening. And then by the time I asked him, I had forgotten what I didn't know because all these buzzwords— but if he wasn't there, I would just use my computer program.

Speaker A: Okay? Yeah, nice! I think that's it. Thank you very much! You stopped recording...
