

Test 1 - Tom

1) ____

If the robot has voice activation it would be better, save time

2) ____

Helps not feel left behind but it depends on the context and background of target user.

If it's concealed then ???

5) If the robot wasn't there..

Ask someone or ask the person talking to me to translate

Adjust double barreling questions

Post-Simulation Questions

Speaker A: Booker tried to explain things, so we went with the robot there. Do you think it would be better to have the robot with you or without the robot while you listen to this? That's my question.

Speaker B: Okay, um, so yeah, so you're asking me like, is it like, am I okay with the robot being here in the conversation?

Speaker A: Would you rather use the robot for assistance? Or just relying on your knowledge?

Speaker B: Oh, okay. I guess if I decide to employ the robot, I probably would want it to play a more active role in assisting. So I'd actually feel like it'd be better for me if, as the person's talking, in between those chunks, it fills in the conversation, or just repeats the entire conversation again, but more in a plainer language, rather than me having to manually do this myself, because that's—

Speaker A: I don't even know, like, I'm not assuming the group has no knowledge of what this mystery is. So let's assume the group has knowledge of what the message is. Yeah. Like, would you feel left behind if you're trying to catch up from the message and you know that the rest of the group has, like, knew what was going on? Would you feel like having the robot would make a difference than usual when you don't really have the chance to ask something like this?

Speaker B: I feel like if the robot itself was more subtle and if I was trying to conceal that I didn't understand the lingo, it'd be nice to have it there in some form so that it can do its job. But then maybe I'd take it away and listen to what it said. Yeah. Does that help answer your question?

Speaker A: Yeah, it's basically a feeling of feeling left behind.

Speaker B: Yeah, yeah. I guess it depends on the context. If I was a person and, you know, maybe I just dropped in this country— I'm sorry, this company from a completely another industry and I just— and everyone knows I don't understand. So it's like there's a thing here helping me. Everyone understands that. Whereas if I'm trying to pretend like I do understand and I don't want people to know that I need assistance, then I'd want the robot to be more like hidden, I suppose. So yeah, just I guess it depends on the context that you use for it. What the motivation that the person that's employing this robot has. Yeah, you may have to narrow that down yourselves. If you want to make this thing a thing that's concealed, or do you want to make it a thing that's out in the open and people know that it's here?

Speaker A: Yeah. So you would say if the robot wasn't there, it would be— if it's concealed, it wouldn't make a difference in terms of environment or knowledge-wise, I guess.

Speaker B: Yeah, yeah, that's right, because if no one knows I'm using it, then like, yeah, it's fine.

Speaker A: I think a question about— oh, it's like, if the robot wasn't there, how would this exact— sorry, how would this exact thing— to understand without this robot here?

Speaker B: Oh, if I didn't have the robot, how would I do it? Um, I guess I would just ask someone, or maybe I'd just ask the person talking to me to, to clarify things. Yeah, yeah, but I guess if we're trying to avoid those situations, then that's like when this is useful. Yeah, but yeah. Okay, thanks. Cool, no worries. But yeah, those are good clarifying, good follow-up questions. I'll just try and make them shorter. Yeah, yeah, yeah, that's all. But writing these sorts of questions is a real art, right? Like, you gotta trial a couple of different things. But there's a general rule around double-barreling. Try not to ask two questions in the same question, if you know what I mean. Yeah, because that sort of, it could confuse the person, but it could also, you might end up being like very wildly different answers, like the answers aren't going to converge always on the thing that you're looking for. Yeah, it just, but other than that, good questions. I definitely spend some time that you got left to grab some people. But yeah, this is a very good prototype, but I'll call it like a very, very early working prototype. We'll have to do something, because I can see that this is just using like chat, you know, and all that sort of stuff. So this won't be super good as like a final thing, but it's fine for now is like a practice thing. Yeah, yeah, we'll have to come up with some kind of like, um, other way for it to communicate the message to people that's not just relying on like— Yeah, yeah, cool. Any questions? How do we feel? This is fun, right? This is good. Yeah, tired. Yeah. All right, cool. Yeah, go find some participants.
